Which States Won Big? The Top Funding Recipients

Trump States Outperform

Infrastructure Funding Gap: How State Politics Influences Infrastructure Investment

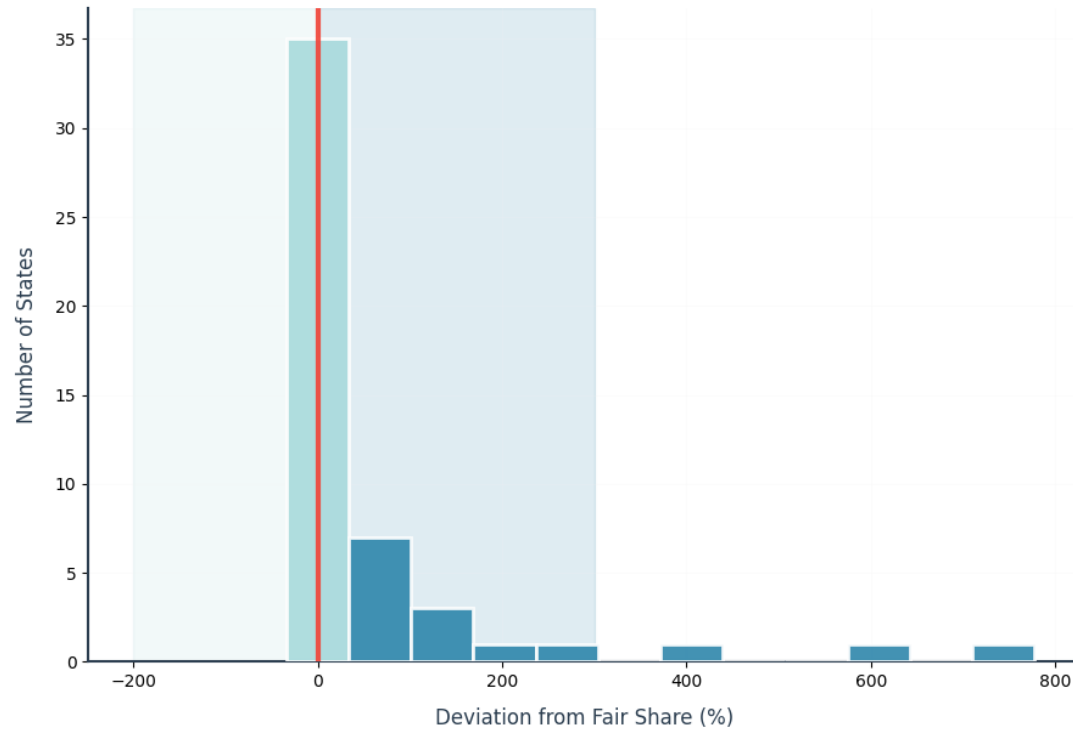

The Population Penalty: Infrastructure's Bias Against Larger States

INFRASTRUCTURE FUNDING: THE POPULATION PARADOX

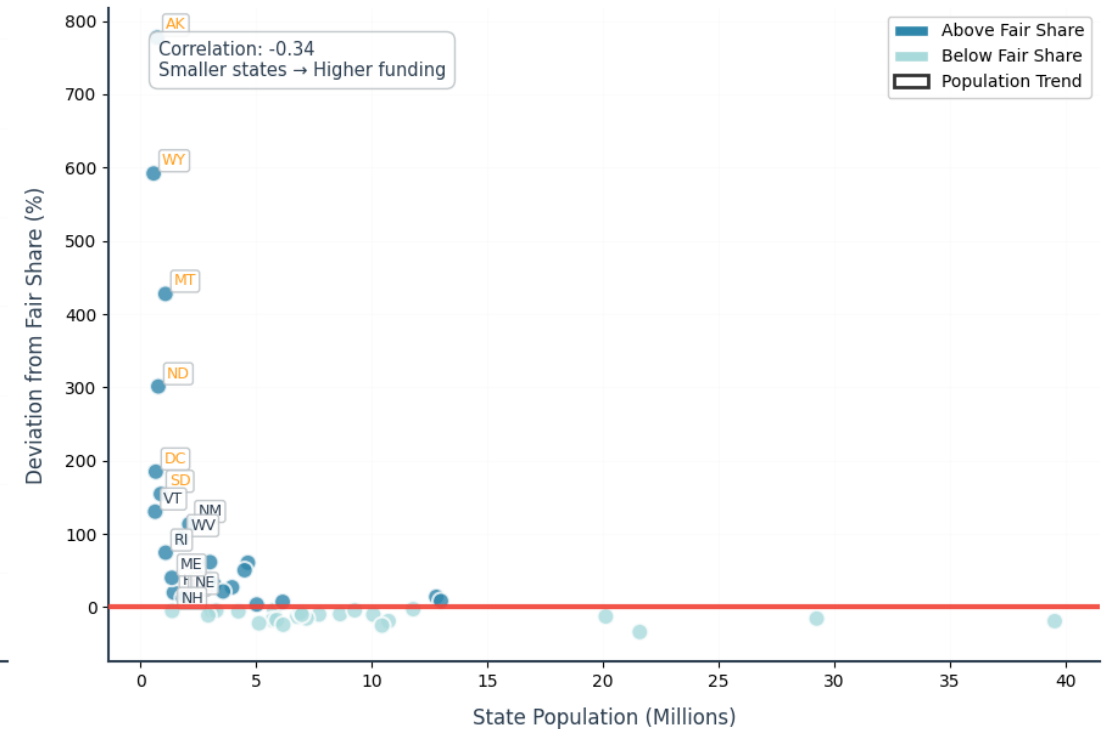

Small, less populous states receive disproportionately more funding per person

THE FAIRNESS GAP: Most States Get Less Than Their Share

Note: "Fair share" = (total funding ÷ total population) × state population | Negative values = less than fair share

POPULATION PENALTY: Smaller States Get More Per Person

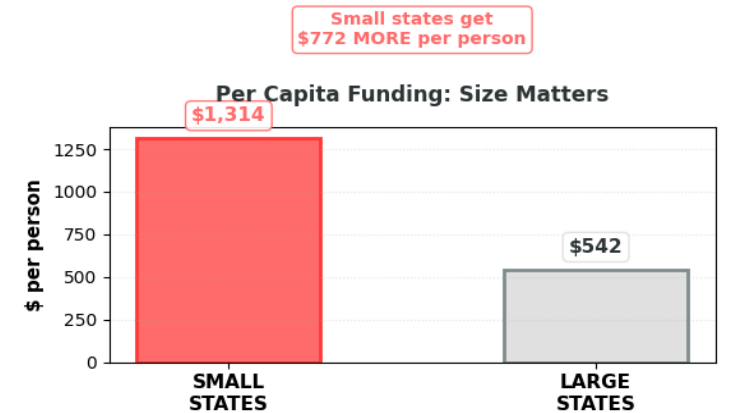

The Great Divide: How Infrastructure Money Favors Small, Red States

EQUITY ANALYSIS: Is Funding Proportional to Population?

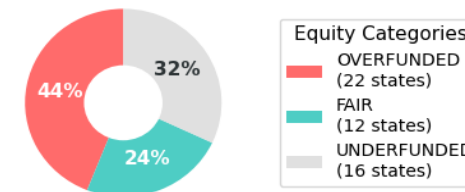

VERDICT: ☐ NOT EQUITABLE

EVIDENCE:

- **Negative correlation:** $r = -0.340$
(Smaller states get MORE per person)
- Only 34 states receive fair share ($\pm 10\%$)
- **Extreme disparity:** 7.3× difference between highest & lowest

Distribution of Fairness

CONCLUSION: Infrastructure funding favors small states, violating population-based equity principles.

Key takeaways:

- **The majority lose:** 25 states receive less than their fair population share
- **Small state advantage:** Least populous states get up to 185% more per person
- **Clear pattern:** negative correlation (-0.34) between population size and funding
- **Trump states receive more funding per person** than Biden states
- **Political alignment shapes funding** distribution across states
